

FUEL SERVICES

(Diesel, Bio, Recycled Oil, Gasoline, Propane, Natural Gas)

Having a strategic fuel management plan in place has become a necessity. For some businesses it means improved profitability—for others it may determine their ability to secure a contract or achieve financial forecasts.

We specialize in customizing fuel management strategies to best serve each business's unique requirements. Let us assist your management in designing and implementing a sustainable program that will continue to save money year-on-year.

ASSESSMENTS

Our Comprehensive Fuel Assessments are designed to measure an organization's exposure from order point through consumption. From ensuring your purchases are invoiced accurately to measuring the effectiveness of your current fueling contract and processes—we can identify missed opportunities.

SOURCING

We understand that many organizations may not be able to devote the internal resources required to fully develop and manage their fuel sourcing requirements. We invite you to utilize our industry relationships and knowledge to provide your organization with market guidance and resources before you enter into your next supplier agreement.

- ◆ Commodity and transport vendor selection, RFP's, contract negotiations, and implementation assistance.
- ◆ Assessment of current sourcing strategies.
- ◆ Price discovery and historical benchmarking to indices.
- ◆ Opportunity analysis on contract pricing as compared to market. (How good is your current price?)
- ◆ Defining fuel testing and specification requirements.

RISK MANAGEMENT

Whether an organization aims to reduce price volatility, ensure internal forecasts, or guarantee future supply. These measures can be accomplished through a variety of physical contracts and financial instruments. RMEM offers:

- ◆ Data acquisition, analysis, and verification.
- ◆ Hedge strategy development.
- ◆ Hedge ratio and target calculations.
- ◆ Hedge effectiveness reporting.
- ◆ Monitoring for future market opportunities.

INVENTORY MANAGEMENT

Many organizations struggle to ensure their fuel inventories and transactions are managed adequately. We offer new technologies and proven practices to increase physical and financial accountability as well as improve product quality.

- ◆ Adequacy of onsite storage facilities.
- ◆ Delivery and fueling logistics.
- ◆ Product monitoring and filtration systems.
- ◆ Fuel additives (price and performance advantages).
- ◆ Dispensing systems and controls.
- ◆ Remote tank telemetry.
- ◆ Inventory security (internal and external).
- ◆ Reconciliation audits.
