

# ELECTRICITY REGULATED

The complexity and volatility surrounding today's electric utility costs requires constant attention, analysis, and review. We focus on providing sustainable solutions to reduce the cost of electricity, as well as increase the efficiency of electrical components and processes within our client's facilities.

## VERIFICATION

While you may not have the option to choose your supplier in a regulated market; you should know that savings opportunities often exist within utility company's rates and incentive programs.

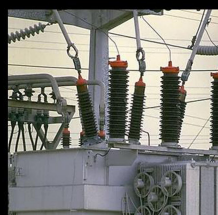

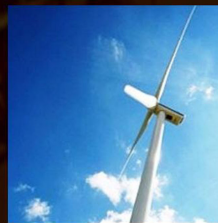

Keeping abreast of utility companies' detailed tariffs, fees, and local tax charges can be overwhelming. We provide verification and analysis services to ensure clients' accounts are billed accurately and served under the most cost effective rate schedule.

Our comprehensive utility invoice audits are designed to identify issues surrounding:

- ◆ Price verification.
- ◆ Taxation.
- ◆ Incorrect rate categorization.
- ◆ Power factor penalties.
- ◆ Program benefit calculations.
- ◆ Duplicate billings.
- ◆ Meter readings.
- ◆ Demand calculations.
- ◆ Adjustments and surcharges.
- ◆ Late fees and penalties.
- ◆ Payment discounts.
- ◆ Misapplied payments.
- ◆ Billing of erroneous accounts.

We understand that your time is valuable and pride ourselves on being as inconspicuous as possible during our review process.

## RATE ANALYSIS

Utility companies offer a multitude of rate schedules, each with requirements designed to best serve a particular type of facility.

Utility companies are not required and often do not have the resources to verify their customers are served under the most cost effective rate schedule. As a result, when operating characteristics and load profiles change, the responsibility to analyze and identify the most cost effective rate often falls on the customer.

We create client specific cost models to determine each account's eligibility and potential cost benefit under all available rate schedules.

## MANAGEMENT SERVICES

We offer account maintenance programs to ensure our audit and analysis efforts will continue to generate verifiable and measurable savings.

These typically include:

- ◆ Usage reporting, demand profiling, and monitoring.
- ◆ Utility data archiving and report generation.
- ◆ Annual forecasting.
- ◆ Sustainability related carbon reporting and verification.
- ◆ Efficiency rebate qualification and processing.
- ◆ Onsite training.
